Business Understanding: Comparison of Original and Final Notebook

Nov 10, 2026 · @Syed Zulkifal Banuri

1. Business objective and success criteria

Item	Original notebook	What you asked	What I suggested	Final notebook	Your reason
1.1 Business objective	Four objectives, with reducing emissions as the main focus: reducing emissions, enhancing air quality, improving resilience to heat and flooding, promoting environmental justice	Review the draft against the objectives and goals	Keep one objective, reducing emissions, and move the other three out of scope	One objective: improve the health and quality of life of New Yorkers by reducing emissions, in line with reaching net-zero emissions by 2050	The reports named two goals, and your instructor said to stick with one, net-zero by 2050

Item	Original notebook	What you asked	What I suggested	Final notebook	Your reason
1.2 Success criteria	Heading only, nothing under it	What the success criteria should be, since OMB sets none and the instructor checks progress, not quality	One analytics criterion and one business criterion, modelled on the lecture's churn example	Both kept. Analytics success: the objective is addressed by four questions, each answered by one chart, and each chart can be reproduced by querying the database and plotting the result with Matplotlib. Business success: OMB can see whether the aligned share of planned capital spending is rising or falling across the three plan editions	You were not sure about them, so you kept them to revisit in later phases. You will use Matplotlib for the charts, and agreed to mention SQL as well to keep the database link

2. Resources, constraints and risks

Item	Original notebook	What you asked	What I suggested	Final notebook	Your reason
2.1 Resources	Three bullets: three years of data (2024 to 2026), a single file of 259K rows and 19 columns, and a mapping of columns to the four objectives	Rework it for a single goal	Keep the data description, add the columns for the primary goal, documentation, tools, and people and time	Suggestion kept. You added Matplotlib and Pandas to the tools and named Claude instead of a general GenAI tool	You will use those libraries, and "GenAI tool" is too general

Item	Original notebook	What you asked	What I suggested	Final notebook	Your reason
2.2 Constraints	No separate section	The same	Planned spending not actual emissions; no prediction until the next module; four charts at most; 1,250-word report; one approved dataset; no demographic data	Three kept: planned spending not actual emissions; four primary charts at most that must answer the primary question; the 1,250-word limit	Removed no prediction to keep everything in scope; removed one approved dataset because you were not sure about it (left out for now); removed no demographic data because it related only to the dropped environmental justice objective
2.3 Risks	No separate section	The same	Unconfirmed amount unit; pending ratings; overlapping plan editions; inconsistent labels; defining aligned; GenAI errors; time pressure	Five kept: pending ratings, overlapping editions, inconsistent labels, defining aligned, and Claude output being wrong	Removed the amount unit because the website states it is in thousands; removed time pressure because it did not feel like a project risk

The three sub-sections were split out of one block, and you kept my structure so you can add or remove items in later iterations.

3. Business and analytics goals

Item	Original notebook	What you asked	What I suggested	Final notebook	Your reason
3.1 Business goals	Two goals: net-zero by 2050 as primary, and protecting the city and its residents from climate threats, marked for the next module	Focus on net-zero after your discussion with Adrian	Keep net-zero as the one goal and move the second out of scope	One goal: reaching net-zero greenhouse gas emissions citywide by 2050, with the press release as the source	Your instructor said to stick with one goal

Item	Original notebook	What you asked	What I suggested	Final notebook	Your reason
3.2 Analytics goals	Five questions about the proportion of projects: emissions, spending, air quality, heat and flood	Four questions that answer the primary question, each with a chart	A primary question and four questions, each with columns, a chart and how it answers the primary goal	All four kept. The primary question now reads "Is planned capital spending moving toward achieving net-zero by 2050"	The questions sounded right
Question 2 wording	Not applicable	You noticed it said "aligned projects" but listed no Project Id	Either add Project Id, or reword to spending	Reworded to "how does planned aligned spending change across fiscal years within each plan edition"	The questions sounded right as they were, so you chose the rewording
Questions 3 and 4	Not applicable	Confirm they are fine	Kept as suggested	Kept as suggested	Both fine for now

Question 1: how is the share of planned capital spending rated aligned with greenhouse gas mitigation changing across the three plan editions (stacked bar by plan edition). Question 2: planned aligned spending across fiscal years within each plan edition (line chart, one line per edition). Question 3: which types of emissions-reducing work receive the most aligned funding (bar chart by tracking category). Question 4: where the not-aligned and pending spending is concentrated (bar chart by asset category or budget line).

4. Project plan

Item	Original notebook	What you asked	What I suggested	Final notebook	Your reason
Project plan	Heading only, with your discussion notes from Adrian beneath it	Devise a plan using the CRISP-DM phases and the 17 December deadline	Five stages from 10 November to 16 December	Kept as suggested, renumbered as section 4	The plan seemed fine as it was

The stages are: 10 to 15 November, finish Business Understanding and start Data Understanding; 16 to 22 November, Data Preparation and database design; 23 to 29 November, load MySQL, write queries and build the four charts; 30 November to 6

December, Evaluation, deployment and report draft; 7 to 16 December, polish, references, final checks and submit (deadline 17 December 2026).

Sources and reminders

Sources used in this phase

- Mayor Adams Celebrates Launch Of New York City's First Climate Budgeting Process (April 2024): business goal source
- NYC OMB, New York City Climate Budgeting, FY2025 Executive Budget: definitions of the ratings
- NYC Open Data, Climate Budgeting dataset and its data dictionary
- Course material: assessment brief, Week 5 lecture and the IDE and GenBA-P lab manual
- Discussion with Adrian, your instructor, on the single goal and the four charts

To record before moving on

- [ ] The page where the website states the amount is in thousands, so you can cite it
- [ ] Check the press release's exact wording before quoting the net-zero goal
- [ ] The human checkpoint for each step in the notebook

Reminders for Data Understanding

- [ ] Question 3: the GHG Mitigation Tracking Category is blank for most rows, so check how many and say so
- [ ] Question 4: choose between Asset Category and Budget Line for the chart
- [ ] Write down which ratings count as aligned
